HALL'S Sanitary Washable DISTEMPER

HALL'S SANITARY WASHABLE DISTEMPER is rapidly superseding wall papers in all tastefully furnished homes. It is made in 70 artistic tints, and only requires the addition of water to make it ready for use. It is quickly and easily applied with a whitewash brush, with half the labour and at one third the cost of paint. HALL'S DISTEMPER ensures cleanliness, and is pleasing to the eye. It appeals alike to artistic and practical house decoration.

HALL'S DISTEMPER is of special value in hot climates. Owing to its cool, pleasing colours, great weather-resisting and germ-killing properties, it lends itself to every kind of wall, wood, brick or stone coating, possessing all the advantages of paint, colour, wash, and disinfectant at one third the cost of oil paint. It never blisters in the hottest sun, and the fact that it can be washed adds greatly to its sanitary advantages.

SUPPLIED IN TINS AND IRON KEGS.

Sole Manufacturers: BISSON'S BROTHERS & CO. LTD., HULL.

Wholesalers in Cairo by FRANK BATHURST, Ltd., 28, SHARIA-EL-MANAKH, CAIRO.

The wind was moderate from the N.E. 11.15
A close haze in both clumps was witnessed.

A MARTYR FOR LABOUR.

It is two years since Stanislaus Ostrogoski lost at sea upon our shores for good or ill. It is twelve months since he left them for good. When he came, the Customs officers passed his baggage without examination. It was wrapped up in his handkerchief. When he left, the secretary of a great union saw him off. And he is buried in the Bethlehem of his native village of Kletchowa.

His preliminary adventures here—were not enrolled in the book of the records of the great Commission. Let it suffice for us that he passed through the usual "Pole's Progress," and that, some nine months from the day of his landing, he got a job at Addisnate's cabinet works in the Bethnal Green-road.

His new comrades hailed his appearance with delight. For there was one remarkable feature about Stanislaus; and that was—his nose! These hung down in glossy black ringlets—out to his shoulders, and they proved a "venial fountain of joy to the workshop."

"Be jakes, boys," cried the merry Irishman at the next bench, "in 'Abraham in the picture he looks like 'em!" And "Abraham" or "Abby" hung round him, and they proved a "venial fountain of joy to the workshop."

—indeed, he hardly understood a word of it. Even their practical jokes had little power to move him. He seemed a bit varied when his cherished curls were powdered all over with sandalwood. He was distinctly annoyed to find half-dozen girls-plotted to them with string. But from his cradle he had learnt to bow the head to Might.

One morning it was Riggs the carpenter who opened the hall by begging for a lock of his hair.

"When my old woman caught sight of you the other day," said he, "she fainted 'er away. And I had to promise her a bit for a souvenir."

"Go on!" shouted another mischievously. "It isn't natural—it's a wig! Why, 'e takes it off every night after 'e goes to bed."

"Bed, but 'e's a liar!" cried the Irishman, with a demonstrative tag that drew the "ears into Stanislaus's eyes." "Unless 'he's a 'pinched some o' the boss's best Scotch glue!"

"Tate!" rebuked Riggs. "Ain't he a walk, advertisement for the Anglo-Polish Hair?"

"He's 'giving 'em a 99 years' lease on it," cried another. "I see it myself at the British Museum."

Upon this followed a general laugh, and for a few minutes nothing was said but the hammer. Then above the din arose a suggestion from the other side of the room—

"You're all wrong; the pore chap's only and up. Let's give 'em a benefit!" And the speaker started the subscription with a wooden button, flung full at the Pole's head.

Whereupon it rained wooden buttons, until suddenly the proprietor himself rushed into the room in a towering rage.

"What the devil's all this row about?" he cried fiercely. "Another time I'll sack the whole blessed lot of you!"

Now Addisnate had no theoretical objection to the beating of "Abraham," indeed, he had joined in it himself at first. But he had since discovered that it wasted a good deal of time, consequently the joke was at his expense. And so he would have sent the Pole about his business but for the fact that he did more work and drew less money than any other man in the shop. But now he saw that his mind to go for the head and front of his clashing.

He took our hero aside and suggested an heroic remedy: In five minutes the local barber wouldn't leave his torturers a hair to hang upon!

Stanislaus made out his meaning in holy horror. His childhood's locks were at the apex of his eye. No one on earth should lay sacrilegious hands upon them. In his short, he flitted and firmly refused. And his employer, lost patience.

"Very well," said he, in vexation, "I give you till the end of the week to make up your mind. On your hair—or take your hair!"

So on the following Saturday, Stanislaus took his wages and unemotionally prepared to take a long farewell.

"Ulo, wot's up with 'Abby'—'e's bin an' took 'is tools," remarked one of his mates in surprise.

"Going to saw his curls off on the 't," suggested Riggs.

But they all looked round the Pole to know the reason why. In his choicest English he sorrowfully explained his departure. There was a great outcry. They had grown to like him in a sort of way. They were loth to lose their boss. And what was Addisnate getting at? Was this a free country—or wasn't it?

Indignation gave place to indignation in the adjournment to the "Spider's" room, the corner, and a meeting, whose consequences have not yet wholly passed away.

The first of these was apparent on the following Monday morning, when, instead of trotting in on the seventh stroke of eight, Stanislaus's men remained outside, leisurely smoking their pipes.

"What game do you call this?" asked the "sawyer," coming to the door in disgust.

He was answered by Riggs and O'Brien, who solemnly proclaimed themselves a deputation. "Deputation!" repeated the amazed Addisnate. "On earth do you want?"

"Why did you sack Ostrogoski?" asked Riggs point blank.

"That's my business," was the sharp answer. "Well, he's a member of our union now, and we can't come in without him," pursued Riggs doggedly.

"Then stop outside!" cried their enraged employer, and slammed the door in their faces.

This was the first affair of outposts in the great labour war; for the Cabinet Union espoused the cause of Stanislaus, and refused to let any of their men work for Addisnate. The Cabinet Union's intention was to interfere; and on their part they declared a general lock-out. And thus began the great strike, which lasted for two months.

The men started with every confidence in the result. They had a large reserve fund lying idle; they might as well lie idle themselves, and who would not rather draw fifteen shillings a week for standing in the Van of Freedom than earn twice as much at the Bench of Slaves?

This was how Johnson put it—Johnson, the veteran leader of strikes. He it was who first detected the above lock. It was not really a case of this man or that man, but part of a deep-laid plan. Yes, they were face to face with a vast conspiracy which threatened to throw back the cause of labour to the days of Cato and Brutus. In the darkest midnight, the Agents never went further than to regulate the coat of the people's clothes. Now they presumed to dictate to them how long they should wear their hair! Surely Englishmen were no, no, never! I never!

This great speech of the renowned leader ran like wildfire throughout the land. Stanislaus Ostrogoski stood revealed to the world as the great labour martyr of the century. Subscriptions flowed in from all parts, even the "Handwerkerverein" of London, a London mark from the remote Poles. The delighted Johnson suggested that the upholsterers, builders, cotton spinners, engineers, and miners should make common cause with his protégés.

But alas! they wouldn't, and this was the beginning of the end. At the end of a month the strength of money dried up. Three weeks later their coffers were empty. Then began a fierce struggle between those who had had enough and those who would never give in. The latter swore they wouldn't leave poor Stanislaus in the lurch; the former were ready to desert him. A loud cry was raised for Stanislaus in creation. Let him go and set up for a guy in his own country if he wanted to.

Words led to blows, riots, the police. This could only end in one way. So the astute secretary of the Cabinet Union, Stanislaus, had a long talk with him. That same day the Pole resigned his membership of the union. Then he promptly disappeared, to the relief of all parties concerned. And with him vanished, too, the cause of strife.

By the following Monday the making of a benefit was the only cause which could fill a hall. In the evening the Paragon Music Hall was crowded at a benefit "on behalf of a poor afflicted brother." The net proceeds amounted to some twenty-five pounds.

Three days later two men bade each other an affectionate farewell on the dock of a Hanover steamer. One of the men was Stanislaus, the other was the man who had been to the office of the union. The other went below and carefully stowed away in his boots five crisp Bank of England notes.

SIR COLIN SCOTT-MONCRIEFF ON IRRIGATION.

At the meeting of the British Association held at Johannesburg on the 29th ult. Colonel Sir Colin Scott-Moncrieff, the President of the Engineering Section, gave most interesting addresses on irrigation. His speech was devoted to the subject of irrigation, and was a most valuable contribution to the subject.

from 10,500 to 8,000 cubic feet per second, was begun in 1859, with the view of carrying water into a tract entirely small and unpopulated. It was opened on a small scale in 1862, was then enlarged, and ten years after it irrigated in one year 1,200,000 acres, supporting a population of 800,000 inhabitants.

The Suddhah Canal, one of the most important of the great canals of India, was opened in 1854, at a time when there was not a mile of railway, and hardly a steam engine within 1,000 miles, and hardly a single mile of railway, and hardly a single steam engine within 1,000 miles, and hardly a single steam engine within 1,000 miles.

"WRITTEN MAGIC."

There is a well-known copy-book maxim, "Familiarity breeds contempt," and in no case more than in the case of the art of writing. Yet this simple, every-day medium of communication has a strange history, in every respect weird and romantic. Now that the world's story is receiving so vast a retrospective enlargement, and the silent Prehistoric Age is as much an open book to the archaeologist as the history to the decipherer, the history of writing becomes but a late chapter in the chronicles of civilisation.

Archaeological research is very iconoclastic in its methods, destroying idealised theories and often producing strange paradoxes. One of these theories apparently applies to writing. The art of writing has been described as "the art of recording events and transmitting messages." To fulfil this purpose writing need not be necessarily associated with language, and throughout the world we find in the rude griffins, or drawings in caves and on rocks, records of the hunter and fisherman. The art of writing has been described as "the art of recording events and transmitting messages." To fulfil this purpose writing need not be necessarily associated with language, and throughout the world we find in the rude griffins, or drawings in caves and on rocks, records of the hunter and fisherman.

rule the pyramids to be buried with the dead were bought from traders, who filled in the names of the deceased where necessary. To be buried without some portion of this talismanic book, either on a papyrus in the coffin, or in the tomb or painted on the walls, would render the deceased's chances of immortality very doubtful. To avoid this copies were supplied containing longer or shorter versions, and usually the most important chapters of the work, such as the Judgment Chapter and the Sixty-fourth, entitled the "Chapter of Knowing the Book of the Dead in a Single Chapter," a section which dated from the time of the third King of the First Dynasty, about B.C. 4300. The beautiful painted coffins from El-Bamash in the Museum are covered with hieroglyphs and text, and they must have been quite hidden from mortal eyes. The whole basis of the belief was that the written book possessed in itself a vital power to repeat itself, and thereby to instruct the dead in the ceremonies and pass words, and so to constitute itself a species of Rosetta-stone to the next world. This idea continued to flourish until the Christian era, and even until long after. As late as A.D. 1410 we have coffins inscribed with extracts from the "Book of the Dead" and other books. When the old Egyptian religion died out or became absorbed by Christianity the custom continued. Of Pagan examples we have the copy of the Second Book of Homer found in the coffin of a female at Haver, on the celebrated Harris papyrus of Homer found in the hands of the mummy at Masabek. The most curious example is the grave of the Christian at Khirmin, in which were found an account book, a portion of the Gospel of St. Peter, and also of the Book of Enoch. Still, therefore, the belief lingered on that the writing was a guide and protection to the deceased.

The beautiful painted coffins from El-Bamash in the Museum are covered with hieroglyphs and text, and they must have been quite hidden from mortal eyes. The whole basis of the belief was that the written book possessed in itself a vital power to repeat itself, and thereby to instruct the dead in the ceremonies and pass words, and so to constitute itself a species of Rosetta-stone to the next world. This idea continued to flourish until the Christian era, and even until long after. As late as A.D. 1410 we have coffins inscribed with extracts from the "Book of the Dead" and other books. When the old Egyptian religion died out or became absorbed by Christianity the custom continued. Of Pagan examples we have the copy of the Second Book of Homer found in the coffin of a female at Haver, on the celebrated Harris papyrus of Homer found in the hands of the mummy at Masabek. The most curious example is the grave of the Christian at Khirmin, in which were found an account book, a portion of the Gospel of St. Peter, and also of the Book of Enoch. Still, therefore, the belief lingered on that the writing was a guide and protection to the deceased.

rule the pyramids to be buried with the dead were bought from traders, who filled in the names of the deceased where necessary. To be buried without some portion of this talismanic book, either on a papyrus in the coffin, or in the tomb or painted on the walls, would render the deceased's chances of immortality very doubtful. To avoid this copies were supplied containing longer or shorter versions, and usually the most important chapters of the work, such as the Judgment Chapter and the Sixty-fourth, entitled the "Chapter of Knowing the Book of the Dead in a Single Chapter," a section which dated from the time of the third King of the First Dynasty, about B.C. 4300. The beautiful painted coffins from El-Bamash in the Museum are covered with hieroglyphs and text, and they must have been quite hidden from mortal eyes.
